ABSTRACT

E-payment system is a way that have made people become more easy and convenient to made their payment without using the cash. Each people will at least have one credit or debit card on their hand or even have online banking to purchase products or services. The main objective for this research is to determine the independent variables that have affect dependent variable which is adoption of e-payment system. The factors (independent variables) that will be covered in this research are convenience, efficiency, security and privacy, and advance technology and internet service. Besides of looking for the independent variables, we will also further study on the benefits of using e-payment system in our daily life. The research will be carried on in Miri and focus on young adults which are between the ages of 18-35 years old by distributing 100 questionnaires to them.
