### **ABSTRACT**

This study examined an awareness of small-scale renewable-energy generation investment in Miri. The main objective of this research is to investigate how awareness of Miri people in renewable-energy business project as part of the investment. Besides, the research methodology used in this research is quantitative method. The questionnaires structure is framed based on rating-based and selective based. The results of the study showed that Miri people aware of investment in renewable-energy business project and also concern about the environmental factor. It has been found that among all the renewable energy sources, solar energy is the most familiar one in Miri. To cope with the renewable-energy growth, the government should provide subsidies and free installation of renewable-energy technologies. In this paper the recommendations have been discussed in order to improve the awareness of renewable-energy and attract and encourage more people to participate in renewable energy project. The future research also discussed in the paper as well to seek more understanding on this field.
