

Title of Thesis	The Study of Awareness among College Students on Water Pollution in Miri
Name	Tracy Kiah Anak Manggat
Program	BA (Hons) Business Administration (In collaborations with UCSI)
Date of Submission	August 2017
Student Thesis Code	2017/AUG/UCSI/BABA/01

ABSTRACT

It's important to understand how water pollution's long-term effects can impact next generation even with limited interface. The awareness on water pollution is to understand the fragility of our clean water and the importance of its protection. Water pollution has become a continuous increasing problem on the earth which is affecting the human and animal lives in all aspects. Furthermore, human population is increasing day by day and thus we need to do some drastic changes in our habits to save the earth water. This research examines cases which reflect the impact to human health, ways to increasing awareness among college students and a possible solution to prevent water pollution. However, most of the respondents agreed that the water conservation is required and this showed that their understanding is based on general understanding rather than the technical one. After the research the respondents believe that clean water is absolutely essential for healthy living. Moreover, the respondents want to have more campaign to create awareness among students to protect water resource to ensure the responsible utilization of water for a sustainable future. In this modern day we can use social media to raise students' awareness on water scarcity. Water education should be encouraged so that people will learn how to keep their water safe for drinking. It is believes that we can change our water future by educating the students on the need to conserve and how to conserve. It is effective to educate children at early ages about the importance of water and the need for its conservation.
